

THE VALUE OF AIR TRANSPORT TO NEPAL

The air transport sector significantly contributes to Nepal's economy

Total economic impact of aviation in Nepal

1.0

381
thousand jobs

There are different ways of measuring air transport's impact on an economy. Two key indicators are the number of jobs and the contribution to gross domestic product (GDP) generated by the aviation sector, including airlines, airport operators and on-site businesses, air navigation service providers (ANSPs), and manufacturers ("direct" aviation players). In Nepal, 12,100 people are directly employed in aviation, generating USD 256.9 million of economic output, equal to 0.6% of total GDP.

Additional benefits are generated by the wider supply chain, employee spending, and tourism activities contributing a total of USD 1.0 billion to GDP and 381,200 jobs.

Tourism supported by aviation contributes USD 542.2 million to the country's GDP and employs 260,900 people. International tourists to Nepal are estimated to contribute USD 633.7 million annually² to the economy through the purchase of goods and services from local businesses.

Note: The table above provides the primary components of the results for 2023; it does not capture indirect and induced benefits, which also form part of the overall total.

Aviation delivers substantial and widespread social benefits

Aviation creates a range of social benefits and contributes significantly to the United Nations Sustainable Development Goals (SDGs).⁴ Air transport enhances access to education, connects friends and families, facilitates cultural exchange, and drives socio-economic development. Acting together, these forces enable a country to expand its productive potential, delivering long-term economic growth and supporting the reduction in poverty and improvement in living standards for all of the nation’s citizens.

The cost of flying impacts the magnitude of the benefits that can be generated by air travel. In the past 50 years, flight costs have decreased by 70% globally,⁵ making air transport more accessible. The average real airfare in Nepal decreased by 37%⁶ between 2011 and 2023, with the local population now needing to work 38.6 days⁷ to afford a plane ticket. Overall, 211 flights per 1,000 population⁸ were taken in 2023.

Air transport facilitates the flow of goods, investment, and trade

Aviation stimulates global trade and investment, enables labor and capital productivity improvements, boosts innovation, and fosters knowledge exchange. The movement of goods, enabled by the air transport industry, brings about improved economic outcomes via catalytic collaboration, specialization, and more efficient allocation of resources across all sectors of the local and world economy.

Aviation plays a crucial role in, for example, enabling the development of dynamic and efficient supply chains, and in driving the growth in e-commerce. In times of crisis, the world relies on air cargo to provide humanitarian aid and emergency relief.

26,400 tonnes of air cargo were transported through airports in Nepal in 2023, supporting the country’s total import and export volumes.

A well-developed aviation network transforms lives and communities

By swiftly and safely connecting people in different cities, air transport generates benefits to consumers and the wider economy. It makes the world smaller, enriching lives and enhancing cultural diversity. In rural and remote areas, air transport provides an essential lifeline for the community, safeguarding access to healthcare, education, and often employment.

Note: Latin America includes South and Central America & the Caribbean.

International air traffic accounted for 38% of total origin-destination (O-D) departures for Nepal in 2023, equal to 2.5 million passenger departures. Asia Pacific is the largest international market for passenger flows from Nepal, followed by the Middle East and Europe. Almost 1.3 million passengers departed from Nepal to another country in Asia Pacific (52% of the total), 740,400 to the Middle East (30% of the total), and 299,100 to Europe (12% of the total).

Connectivity is vital to economic development

Air connectivity is fundamental to unlocking a country’s economic growth potential and prosperity; it enables industries across all regions within the country to engage in dynamic business activity. The extent of domestic and international connectivity is an enabler and an accelerator of both the generation and distribution of economic benefits.

airports with commercial scheduled flights	international airports directly connected	countries connected by direct flights	outbound international flights a day	new international routes in the last 5 years	operating airlines ¹⁰

Source: OAG, 2023

Since 2014, Nepal’s international air connectivity index has increased by 14% within the Asia Pacific region and by 120% with all other regions. Understanding the nature of that connectivity is also important. For Nepal, 99% of passengers either finished their journey at the point of entry to the country or continued traveling using a different mode of transport. Only 1% of all passengers arriving in Nepal from abroad continued their journey to a destination in another country.

⁶ Real airfares refers to the average fare for O-D trips to/from/within country adjusted by inflation. Calculated based on data from IATA Direct Data Solutions (2023) and International Monetary Fund (2023).
⁷ The number of days that the local population needs to work to afford a flight is estimated based on the average fare for travel and GDP per capita in 2023. Calculated based on data from IATA Direct Data Solutions (2023) and World Bank (2023).
⁸ The number of flights per capita is estimated based on the O-D passenger traffic and the population in 2023. Calculated based on data from IATA Direct Data Solutions (2023) and World Bank (2023).
⁹ The number of days that the local population needs to work to afford a flight is estimated based on the average airfare for travel and GDP per capita in 2023. Calculated based on data from IATA Direct Data Solutions (2023) and World Bank (2023).
¹⁰ A threshold of at least one scheduled flight a week is applied.
¹¹ IATA Connectivity Index is calculated as the total route capacity (in terms of seats available) weighted by the destination airport’s capacity. The Connectivity Index is calculated based on data from OAG (2023).
¹² Refers to international passengers arriving in the country and their onward connections. For example, if a passenger arrives in the country but does not connect either domestically or internationally by air, they are categorized as “No onward connection”. A passenger connecting within a country is categorized as “Onward domestic connection” and an arriving passenger connecting to an international flight is categorized as “Onward international connection”.
