

# THE VALUE OF AIR TRANSPORT TO THE PHILIPPINES

The air transport sector significantly contributes to the economy of the Philippines

## Total economic impact of aviation in the Philippines

There are different ways of measuring air transport's impact on an economy. Two key indicators are the number of jobs and the contribution to gross domestic product (GDP) generated by the aviation sector, including airlines, airport operators and on-site businesses, air navigation service providers (ANSPs), and manufacturers ("direct" aviation players). In the Philippines, 76,100 people are directly employed in aviation, generating USD 3.3 billion of economic output, equal to 0.8% of total GDP.

Additional benefits are generated by the wider supply chain, employee spending, and tourism activities contributing a total of USD 20.3 billion to GDP and 1.9 million jobs.

Tourism supported by aviation contributes USD 11.0 billion to the country's GDP and employs 1.3 million people. International tourists to the Philippines are estimated to contribute USD 11.3 billion annually<sup>2</sup> to the economy through the purchase of goods and services from local businesses.

Note: The table above provides the primary components of the results for 2023; it does not capture indirect and induced benefits, which also form part of the overall total.

## Aviation delivers substantial and widespread social benefits

Aviation creates a range of social benefits and contributes significantly to the United Nations Sustainable Development Goals (SDGs).<sup>4</sup> Air transport enhances access to education, connects friends and families, facilitates cultural exchange, and drives socio-economic development. Acting together, these forces enable a country to expand its productive potential, delivering long-term economic growth and supporting the reduction in poverty and improvement in living standards for all of the nation’s citizens.

The cost of flying impacts the magnitude of the benefits that can be generated by air travel. In the past 50 years, flight costs have decreased by 70% globally,<sup>5</sup> making air transport more accessible. The average real airfare in the Philippines decreased by 29%<sup>6</sup> between 2011 and 2023, with the local population now needing to work 13.5 days<sup>7</sup> to afford a plane ticket. Overall, 352 flights per 1,000 population<sup>8</sup> were taken in 2023.

## Air transport facilitates the flow of goods, investment, and trade

Aviation stimulates global trade and investment, enables labor and capital productivity improvements, boosts innovation, and fosters knowledge exchange. The movement of goods, enabled by the air transport industry, brings about improved economic outcomes via catalytic collaboration, specialization, and more efficient allocation of resources across all sectors of the local and world economy.

Aviation plays a crucial role in, for example, enabling the development of dynamic and efficient supply chains, and in driving the growth in e-commerce. In times of crisis, the world relies on air cargo to provide humanitarian aid and emergency relief.

830,000 tonnes of air cargo were transported through airports in the Philippines in 2023, supporting the country’s total import and export volumes.

## A well-developed aviation network transforms lives and communities

By swiftly and safely connecting people in different cities, air transport generates benefits to consumers and the wider economy. It makes the world smaller, enriching lives and enhancing cultural diversity. In rural and remote areas, air transport provides an essential lifeline for the community, safeguarding access to healthcare, education, and often employment.

Source: IATA DDS, 2023

Note: Latin America includes South and Central America & the Caribbean.

International air traffic accounted for 30% of total origin-destination (O-D) departures for the Philippines in 2023, equal to 12.3 million passenger departures. Asia Pacific is the largest international market for passenger flows from the Philippines, followed by North America and the Middle East. Almost 7.9 million passengers departed from the Philippines to another country in Asia Pacific (65% of the total), 1.7 million to North America (14% of the total), and 1.5 million to the Middle East (12% of the total).

## Connectivity is vital to economic development

Air connectivity is fundamental to unlocking a country's economic growth potential and prosperity; it enables industries across all regions within the country to engage in dynamic business activity. The extent of domestic and international connectivity is an enabler and an accelerator of both the generation and distribution of economic benefits.

### Air connectivity indicators for the Philippines

<b>45</b>	<b>64</b>	<b>28</b>	<b>184</b>	<b>20</b>	<b>55</b>
airports with commercial scheduled flights	international airports directly connected	countries connected by direct flights	outbound international flights a day	new international routes in the last 5 years	operating airlines <sup>10</sup>

Source: OAG, 2023

Since 2014, international air connectivity index of the Philippines has decreased by 10.4% within the Asia Pacific region and increased by 72% with all other regions. Understanding the nature of that connectivity is also important. For the Philippines, 8% of all passengers arriving internationally continued their journey on a domestic connection. 86% of passengers either finished their journey at the point of entry to the country or continued traveling using a different mode of transport. 5% of all passengers arriving in the Philippines from abroad continued their journey to a destination in another country.

<sup>6</sup> Real airfares refers to the average fare for O-D trips to/from/within country adjusted by inflation. Calculated based on data from IATA Direct Data Solutions (2023) and International Monetary Fund (2023).  
<sup>7</sup> The number of days that the local population needs to work to afford a flight is estimated based on the average fare for travel and GDP per capita in 2023. Calculated based on data from IATA Direct Data Solutions (2023) and World Bank (2023).  
<sup>8</sup> The number of flights per capita is estimated based on the O-D passenger traffic and the population in 2023. Calculated based on data from IATA Direct Data Solutions (2023) and World Bank (2023).  
<sup>9</sup> The number of days that the local population needs to work to afford a flight is estimated based on the average airfare for travel and GDP per capita in 2023. Calculated based on data from IATA Direct Data Solutions (2023) and World Bank (2023).  
<sup>10</sup> A threshold of at least one scheduled flight a week is applied.  
<sup>11</sup> IATA Connectivity Index is calculated as the total route capacity (in terms of seats available) weighted by the destination airport's capacity. The Connectivity Index is calculated based on data from OAG (2023).  
<sup>12</sup> Refers to international passengers arriving in the country and their onward connections. For example, if a passenger arrives in the country but does not connect either domestically or internationally by air, they are categorized as "No onward connection". A passenger connecting within a country is categorized as "Onward domestic connection" and an arriving passenger connecting to an international flight is categorized as "Onward international connection".
